

PRODUCT DATASHEET

Rectangular HVT Venturi RFV Series

Description

The HVT designed Rectangular Venturi Meters offers substantial design and engineering flexibility with end arrangements (flanged, mechanical joint, weld end, etc.) combined with various body materials and coatings to achieve pressure, temperature, flow range, line fluid, line size, laying length and cost objectives as dictated by the specific applications. The Rectangular Venturi Meter design provides similar performance as the circular design (accuracy and head loss) without the need to transition from rectangular duct to circular for the purpose of achieving high accuracy flow measurement. There are no specific size limitations with a rectangular venturi. The meter profile can be fully fabricated or cast in place with a fabricated inlet and throat section. A wide variety of secondary instrumentation is available including direct interface taps, annular pipe chambers, multi-taps and sealed diaphragm sensors. A design corresponding to ASME MFC / ISO 5167 is also available.

Common Materials

· Carbon Steel · 304 / 316SS

Other Available Materials

• Aluminum

• Monel

- Tantalum
 Duplex S/S
 Zirconium
 321 SS
- Hastelloy B & C • Titanium
- \cdot Chrome Moly

Applications

- \cdot Duct air and gases
- Combustion air
- Refineries
- Steel Mills
- Heater Applications

Special Features

- Extended product life with no moving parts
- \cdot Lower susceptibility to erosion
- No downstream installation effect; minimal upstream effect
- \cdot Useful for flow measurement at high velocities
- Turndown ratio of 10:1, 20:1, 50:1 and greater can be achieved depending on the specific model and design of the meter as well as the type of secondary instrumentation system utilized
- Repeatability of ± 0.1%
- Mounts in any position

Model Types

- RFVF Fabricated Venturi Flanged
- \cdot RFVW Fabricated Venturi Butt Weld Ends

Specifications

Line Size: 2 to 144 inches. Larger sizes available.

Head loss % of Differential: 5.0 to 12.0 percent

Basic Accuracy (% of Total): +/- 0.50 (Calibrated) +/- 0.75% (Uncalibrated)

Minimum pipe Reynolds number: Must be greater than 75,000

Required Straight Piping: Consult PFS datasheet

Beta Range: 0.30 through 0.75

Useful Service Life: Very Long

Service Functional Limits: Gas

Providing Reliable Flow Measurement Since 1983
